

## CLAIMS

18. What I Brian Wallenstein of 2920 Pine Grove Dr. Mount Shasta Ca. claim as my inventions in this array of alarms is the ONLINE aspect of fire safety is the automatic mechanical and electrical delivery and redundancy in location information to the 911 Dispatcher.
19. I claim the use of the USB, 802.11b, and the use of the PC and MAC as a means to aid in the delivery of fire alerting through the combination of these communication devices fused with the fire/smoke alarm triggering the USB port, voice modem that informs 911 personnel to location , name address, other pertinent data through the simple wake on voice modem software , and the standalone all in one voice modem smoke alarm that plugs into your existing phone line that automatically calls 911 when smoke and fire are present in the allowable tolerances, with the auto dialing to 911 with programmable name, address, phone number and possibly other pertinent information such as medical conditions present, number of alarms, rooms in home and square footage, and pertinent information that would aid in fore prevention and fire suppression.
20. I also claim the unique online pay service that can aid in the evacuation of occupants of home by means of informing neighbors, redundantly call fire authorities,
21. I also claim the much louder 200db horn for greater broadcasting and alerting to help keep children awake.
22. The use of a USB and or a wireless 802.11b camera is also a consideration in the design of a premium model that is only activated when smoke is present helping the online service and Fire Dept. personnel locate the fire, and children to rescue them quicker and possibly save more lives.
23. The call back from the 911 personnel will also greatly help potential fire victims flee from their burning home by adding another interruption to deep sleep.
